

## GoMeetNow - TurboMeeting

### Web Conferencing Overview

The GoMeetNow web conferencing system is a powerful, cost-effective business tool to:

- Give sales presentation
- Demo products or services
- Support PC & Mac remotely
- Host webinar
- Provide online training
- Meet and collaborate over the Web

### Web Conferencing Features

The most distinctive advantage that GoMeetNow has over any other Web conferencing service you have used is

#### [The Web Conferencing service that guarantees your attendees can join your Web meetings](#)

Attendance failure can be due to many reasons such as: firewall blocking, corporate download policy and antivirus products. It is one of the most difficult issues facing every web conferencing system today. RHUB's patent pending Universal Attendance Technology, which enables the GoMeetNow service, has resolved this issue for the first time with the commercial quality.

#### **100% Attendance - No Download of Any Kind!**

If you have used web conferencing before, you may experienced that some of your attendees failed to join your conference and the whole conference fell apart. Let alone the frustration and time taken by your attendees to download and install meeting client software. There are many possible reasons for this kind of failure:

- Computer locked down by corporate IT policy that prevents installation of any software
- Blocked by firewall and proxy servers
- Blocked by anti-virus and anti-spy software
- Unsupported platforms like Mac, Linux, Unix, etc.
- Wrong or missing Java Virtual Machine or Flash installation

100% attendance using only a browser has been demanded since the day Web conferencing started. **Today, GoMeetNow provides the first truly universal attendance web conferencing solution.**

- Your meeting attendees do not need to download any kind of software, no Java Applet, no Flash and no documents.
- As long your attendees can view Google/Yahoo maps with their browsers from any platform (Windows, Windows Mobile, Mac, Linux, UNIX and iPhone) they can quickly and easily join your meeting and see your presentation.
- Joining a meeting is as easy as typing a URL and as fast as 5 seconds depending on your attendees' Internet connection speed.

TurboMeeting supports more sophisticated and powerful meeting types other than the seminar no-download meeting type. Those meeting types require meeting attendees to download and install TurboMeeting.

The table below shows the main features that GoMeetNow offers.

<b>Main Features</b>	<b>Descriptions</b>	<b>Supported Platforms</b>
<b>Present and control remotely</b>	Everyone in a meeting can present what is on his computer screen. Everyone can control the presenter's computer with permission from the presenter.	PC & Mac
<b>Application sharing</b>	You can present one specific application and hide everything else on your screen to protect your privacy	PC & Mac
<b>View-only with no-download</b>	You can invite your attendees to join your meeting to view your presentation. This is commonly used for sales presentation, seminars, etc. No download is required. This feature is the most reliable and quickest way for your attendees to join a meeting. Only supports PC presenters.	All platforms (PC, Mac, Linux, Unix, iPhone)
<b>File transfer</b>	Attendees can send files (or directories) to all attendees or a specific attendee. Sending files can automatically continue when the attendee internet reconnects.	PC
<b>Firewall &amp; proxy friendly</b>	Complies with existing firewall settings, without compromising security.	All platforms
<b>Compatible with lock down computers</b>	Capable of working with lock down computers	All platforms
<b>Chat</b>	Interactive meeting attendees can chat with each other. Chat sessions can be saved for later reference.	PC & Mac

<b>Change colors</b>	Easily changes colors from 256 colors (for the fastest speed), 16-bit to 32-bit true color (for the best image quality). For example, for remote support, the 256 color is adequate. For artwork with a client, choose 16-bit or 32-bit.	PC & Mac
<b>Pause meetings</b>	You can pause a meeting during the middle of the meeting to do something else that you don't want to share with your attendees.	PC & Mac
<b>Whiteboard</b>	A whiteboard is available for drawing	PC & Mac
<b>Annotation</b>	Allows you to draw annotation marks anywhere on your screen to emphasize your points or ideas. You can save the annotation in to a JPEG file (not available for Mac).	PC & Mac
<b>Auto-reconnection</b>	It can easily happen that your or your attendee's internet disconnects in the middle of a meeting due to many reasons. Your meeting will continue as soon as the Internet reconnects. No need to restart or rejoin a meeting.	All platforms
<b>Schedule Meetings</b>	You can schedule meetings including recurring meetings	PC & Mac
<b>Free audio conferencing</b>	Participants can place standard long-distance calls. Toll-free numbers are also available.	N/A
<b>Fit-to-screen display</b>	Perfectly displays the presenter's screen in your screen size	PC
<b>International Language support</b>	The current version has supported English, Spanish, Chinese (Simplified & Traditional) and Japanese.	PC
<b>Recording</b>	Record screen and voice. Player is built in with recording data. One executable file has both data and player.	PC
