

PANDA CLOUD EMAIL PROTECTION

Simply... *Evolution*

Some 98% of the email that reaches companies is infected and/or is spam. This seriously impacts business productivity, wasting several working days per year for every employee.

Panda Cloud Email Protection is a security solution for email based on the concept of software as a service (SaaS). This concept lets companies focus on their core business, freeing them from the management tasks and operating costs associated with traditional security solutions.

This service is also included in Panda Cloud Protection, an innovative service providing continuous, 'hands-free' protection for endpoints and email.

Panda Cloud Email Protection comprises a multi-layer system of filters and protection mechanisms, leveraging Panda Security's Collective Intelligence knowledge base to deliver the most effective security.

It significantly reduces mail server workloads by eliminating spam and removes all types of malware from inbound and outbound mail.

Panda Cloud Email Protection has an intuitive, easy-to-manage interface allowing administrators to rapidly set up the protection

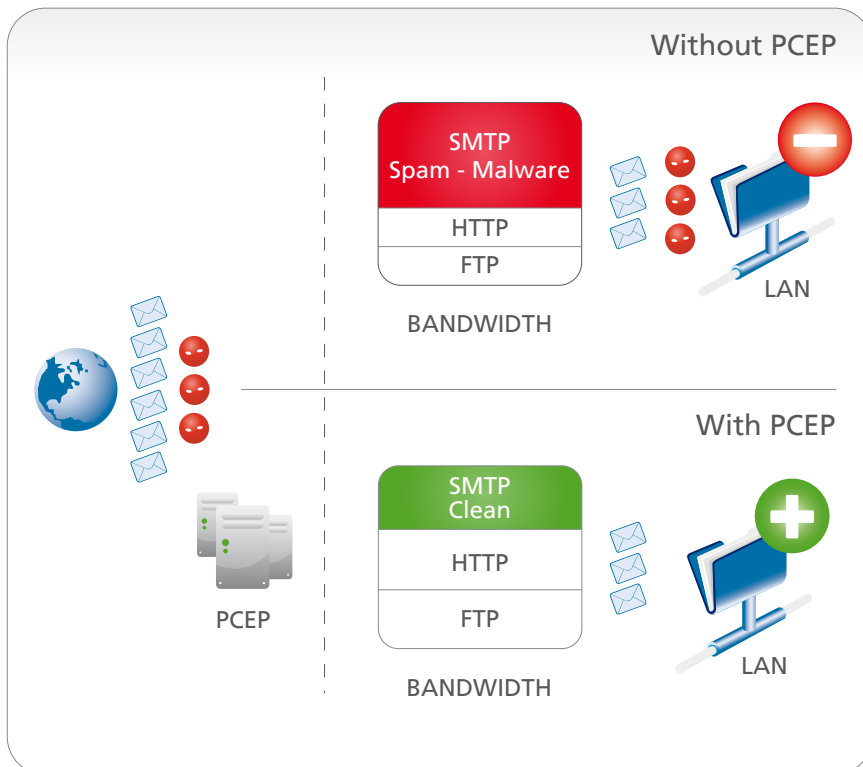

PANDA CLOUD EMAIL PROTECTION minimizes resource consumption. It is **extremely light and requires no client infrastructure**, as all operations are performed in the cloud.

PANDA CLOUD EMAIL PROTECTION offers **immediate, effective protection** against **viruses and spam** through online scans performed in Panda Security servers.

PANDA CLOUD EMAIL PROTECTION is **incredibly simple** to use. Configuration of the service and the console couldn't be easier, ensuring complete operability right from the outset.

Main benefits

- ⊕ **Complete protection.** Panda Cloud Email Protection eliminates all types of spam and malware, **increasing user productivity and ensuring mail server integrity.**
- ⊕ **Minimizes maintenance costs.** The solution requires no investment in infrastructure or specialized personnel, as everything is hosted in the **cloud.**
- ⊕ **Easy to use, easy to maintain.** **Simple**, automatic setup and startup can be run from any computer.
- ⊕ **Guaranteed availability.** **Complete accessibility** to email through a webmail service in the event of mail server failures.
- ⊕ **Detailed reports.** Automated **periodic reports** offer a detailed view of all activity.

Maximum spam and malware detection

- Ⓞ Powerful antivirus engine offers maximum detection capacity by leveraging Collective Intelligence.
- Ⓞ Effective mail filtering, with spam detection ratios close to 99%.

Software as a service

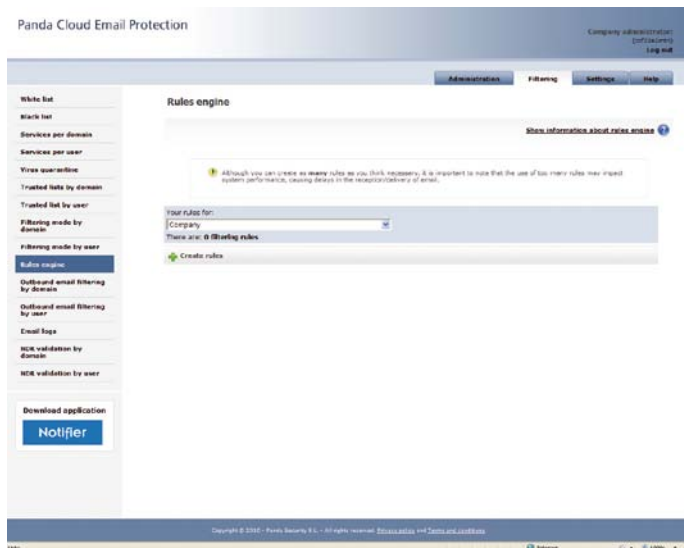

- Ⓞ Minimized operating costs.
- Ⓞ No need for investment in software, hardware or specialized personnel.
- Ⓞ Optimized bandwidth.

Business continuity

- Ⓞ Protection against mail server crashes.
- Ⓞ Email backup.
- Ⓞ Mail can be accessed from the Web management console.
- Ⓞ 24x7x365 monitoring service.

Simplified management

- Ⓞ Centralized administration from a Web console.
- Ⓞ Management options by company, domain and user.
- Ⓞ Administered from anywhere, no need to be on-site.
- Ⓞ Report scheduling and email notifier.

Key features

WEBMAIL

- Ⓞ Email available and accessible at all times.
- Ⓞ Allows composing, receiving and sending of emails even when the email server has failed.

LDAP INTEGRATION

- Ⓞ Fast and simple inclusion of new accounts.
- Ⓞ Recognition of all email accounts on a network.
- Ⓞ Automatic inclusion in the service.

RULES ENGINE

- Ⓞ Simplifies implementation of email content policies.
- Ⓞ Criteria can be established for automatic processing of spam.

ADMINISTRATION BY COMPANY, DOMAIN OR USER

- Ⓞ Web administration interface based on profiles.
- Ⓞ Settings at company, domain or user level.
- Ⓞ Scheduled reports can be programmed for users and administrators.

Our client has 27 mailboxes receiving an average of 120 spam messages every day. Panda Cloud Email Protection has resolved this critical, spam management situation, eliminating the manual task of filtering and deleting junk mail. After just 7 days using it they rated it 10 out of 10."
